Create a simple calculator using python.

Requirements

1. Display list of operations in menu with exit option
2. After user chooses the menu ask for the input
3. Calculate the input based on operation chosen by user
4. Display results
5. And Display Operations Lists

There should be a flowchart explaining the process along with the documentation. Source code should be uploaded in gitlab. Presentation will be there for a demo of the application.

*Note: Questions regarding application/ code will be asked. Failed to answer the questions will be not eligible for getting marks for this mini-project
